Abstract of JP 2001129003 (A)

PROBLEM TO BE SOLVED: To provide a bio-filler injecting tool which can prevent a bio-filler contained in the tool from leaking out to an unintended part even when the tool is bent. **SOLUTION:** A bio-filler injecting tool is provided with an outer tube 2 having an internal space for housing a bio-filler 4; a discharging section 5 which is attached to the front end of the tube 2, has a hole for discharging the filler 4, and is made of an elastic material; and a pushing-out means 3 which applies an external force to the material 4 housed in the internal space of the tube 2 and/or the discharging section 5. The hole of the section 5 has a smaller diameter than the filler 4 has, and is expanded by the external force so as to discharge the filler 4.
